The screenshots of the session

R Programming in Data Science for Data Visualization and for other Practices

SKCET, Coimbatore

by P. M. Durai Raj Vincent Associate Professor

Why now?

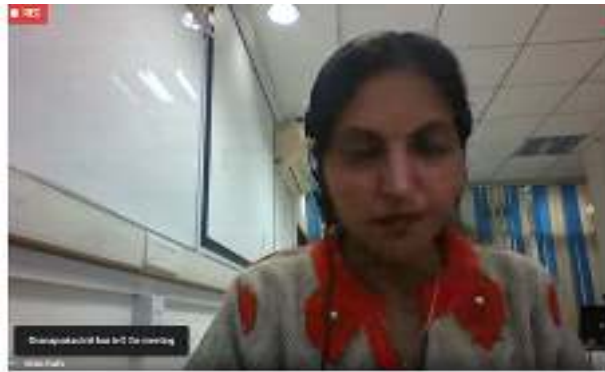

- Data is everywhere, but many only use the simple tools like Excel
- Data is growing rapidly
- Quality matters in using IT applications like cloud storage & data science
- The data is getting too big

Handling Missing Values using KNN

- `install.packages("kNNImpute")`
- `library(kNNImpute)`
- `big_mart_imputed <- kNN(mart)`
- `mart$Item_Weight[is.na(mart$Item_Weight)] <- median(mart$Item_Weight, na.rm=TRUE)`

Why traditional database systems fail to support "big data"

- Oracle or mysql not a good solution
- Not horizontally scalable
- RDBMS works good for Structured data
- Variety of data RDBMS fails

Scalability

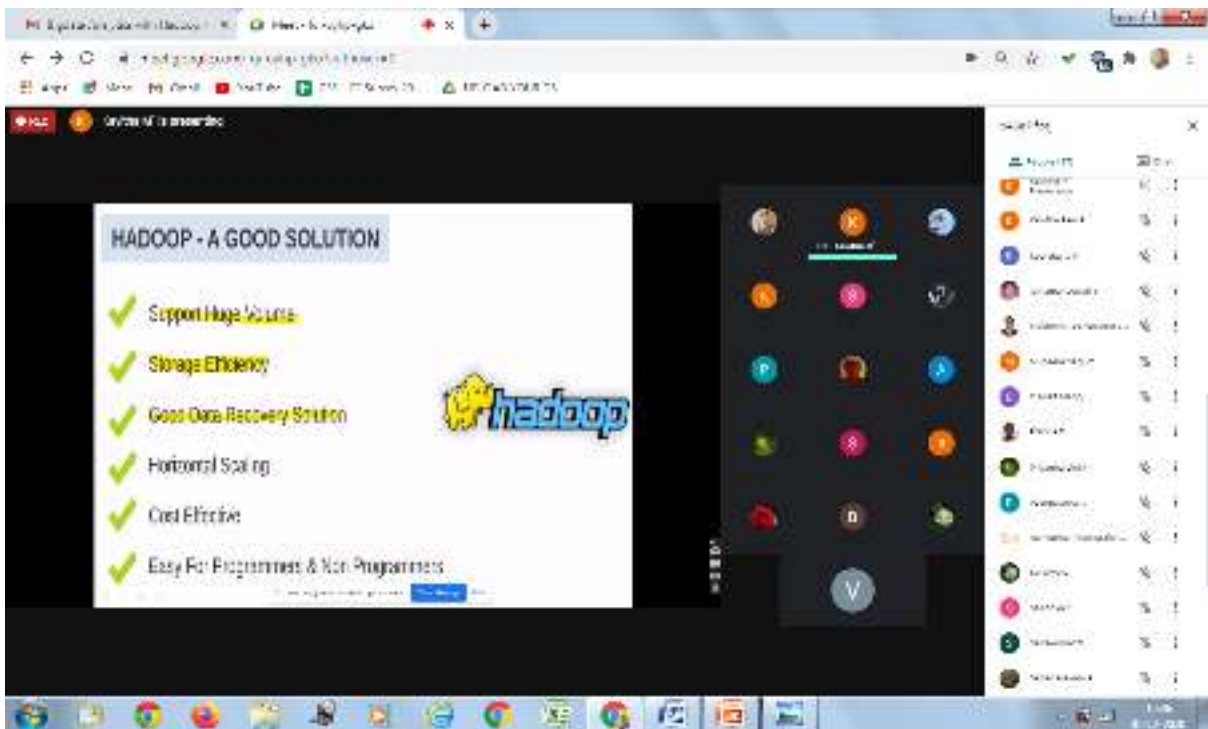

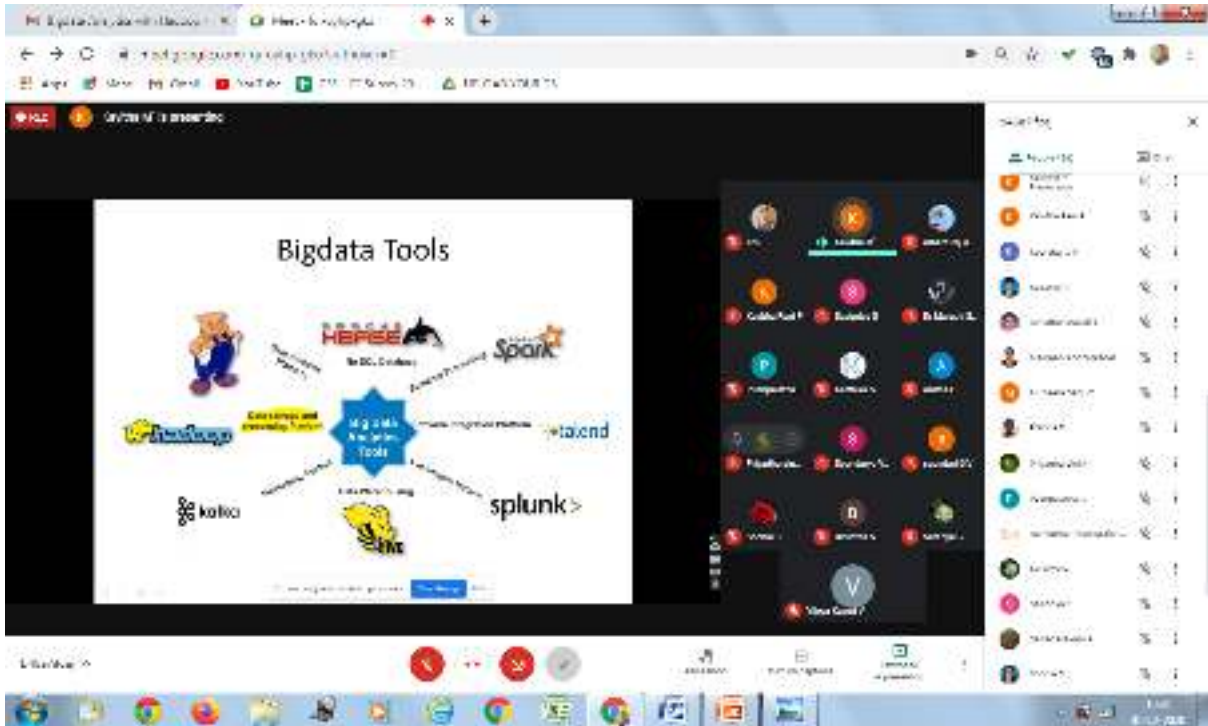

RDBMS

Format

Challenges in Big Data	Solution
Single central storage	Distributed storage
Serial processing ✓ One input ✓ One processor ✓ One output	Parallel processing ✓ Multiple inputs ✓ Multiple processors ✓ One output
Lack of ability to process unstructured data	Ability to process every type of data

HDFS - Reliable Shared Storage
+
MapReduce - Distributed Computation
=
hadoop

Hadoop is a framework for distributed processing of large data sets across multiple commodity hardware.

The slide features a diagram showing a central server icon labeled 'HDFS' connected to three server icons labeled 'Nodes'. Below the nodes is a bracket labeled 'MapReduce'.

PILE OF PAPERS VS. BOOK

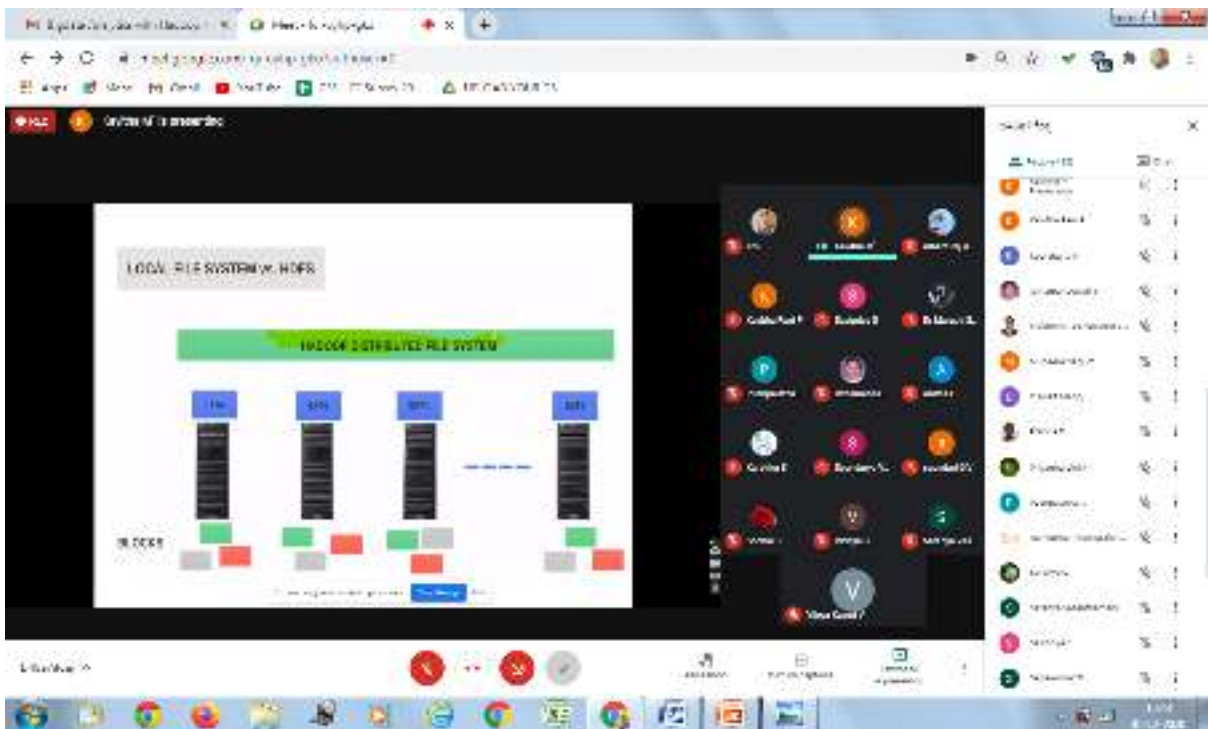

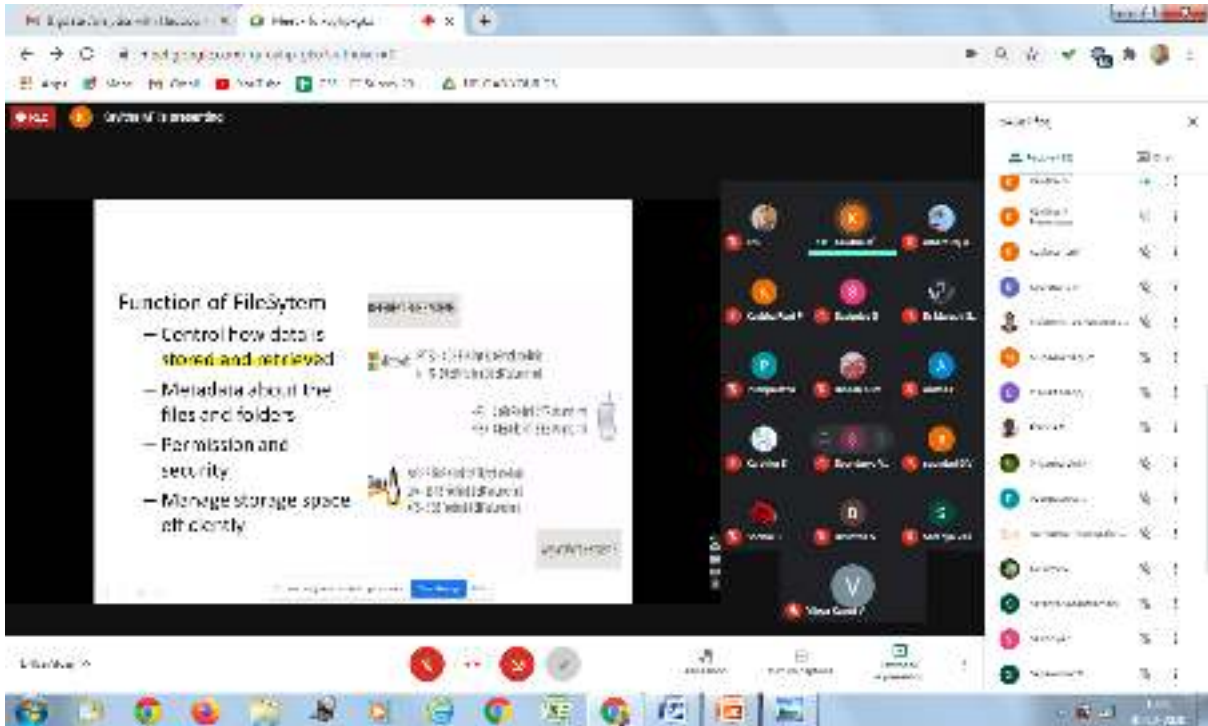

Go to Chapter 34 - Ad.2

Without a file system, information placed in a storage area would be one large body of data with no way to tell where one piece of information stops and the next begins.

The slide includes an illustration of a tall, disorganized stack of papers on the left and a neat, bound book on the right, with 'VS' between them.

Session on “Lean start-up and minimum viable product/business”

Objective (Max 50 words)

IIC of SKCET in association with Department of Information Technology organized online virtual session on “Lean start-up and minimum viable product/business”. Dr. K. Nagarajan, Professor, School of Management, was the resource person of the event. The objective of the session is to motivate the students to indulge in Lean start-up. Lean startup is a methodology for developing businesses and products that aims to shorten product development cycles and rapidly determine if a proposed business model is viable; this is achieved by adopting a combination of business-hypothesis-driven experimentation, iterative product releases, and validated learning. Lean startup highlights customer feedback over intuition and flexibility over planning. This methodology enables recovery from failures more often than traditional ways of product development. Three main steps entrepreneurs can take to begin building a lean startup: Find, Execute, and Validate. A minimum viable product (MVP) is a concept from Lean Startup that stresses the impact of learning in new product development.

There are five main principles for creating lean startups:

Entrepreneurs are everywhere.

Entrepreneurship is management.

Validated learning.

Innovation Accounting.

Build-Measure-Learn.

Outcome (Max 50 words)

Students and faculty members of SKCET attended the session. The session was conducted through Google Meet. The session was recorded and saved in the drive. The link of the video was sent to all the students and faculty members of SKCET. Students got motivated to develop the lean startup approach helps new ventures launch products that customers actually want, far more quickly and cheaply than traditional methods.

Session on “Entrepreneurship-Building a Dream”

Objective

IIC of SKCET in association with Department of Information Technology organized online virtual session on “Entrepreneurship-Building a Dream”. Mr.G.Makesh, CEO, Crayon’d Solutions, Chennai was the resource person of the event. The objective of the session is to motivate the students to indulge in building a dream and achieve it successfully. By saying the wonderful quote the session started “All our dreams can come true, if we have the courage to pursue them.” When things are difficult, unknown, and perhaps unattainable we may turn the other direction. We must find the inner strength to overcome these perceived barriers. Most dreams can come true, but you need to be courageous to pursue them. You need to get out of your comfort zone. You need to invest time and energy. If you just daydream, and avoid making changes in your life, nothing will happen, except feelings of frustration and missed opportunities, and maybe, anger and envy. If you really want to win then you must have the courage to fail. There is nothing ... We all exist in the wonderful thing and we all have one great thing called life.
